DETAILED ACTION

Allowable Subject Matter

1. Claims 4 and 6 allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record, taken alone or in combination, fails to teach or disclose in light of the specifications, 1) a method of driving a reflective type ferroelectric liquid crystal display having a polarization beam splitter, a display panel disposed between the polarization beam splitter and a mirror to satisfy a quarter plate condition, and in which half-V type ferroelectric liquid crystal is filled between first electrode layers, display to be opposite to each other, a compensation panel which is disposed between the display panel and the polarization beam splitter to satisfy a half plate condition, in which half-V type ferroelectric liquid crystal is filled between second electrode layers, disposed to be opposite to each other, and the first and second electrode layers are disposed to be orthogonal to each other wherein an AC potential, by which an included angle between an axis of the liquid crystal of the compensation panel and an axis of the liquid crystal display in a case that a potential is not applied to the display panel is varied within a range of 67.5° - 90° , is applied to the second electrode layers of the compensation panel; and 2) a method of driving a reflective type ferroelectric liquid crystal display having a polarization beam splitter, a display panel in which the half-V type ferroelectric liquid crystal is filled between first electrode layers, disposed to be opposite to each other, a compensation panel in which half-V type ferroelectric liquid crystal is filled between second electrode layers, disposed to be opposite to each other, and the first and second electrode layers are disposed to be orthogonal to each other wherein an AC potential, by which an included angle between an axis of the liquid crystal of the compensation

panel and an axis of the liquid crystal display in a case that a potential is not applied to the display panel is varied within a range of 67.5° - 90° , is applied to the second electrode layers of the compensation panel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard H. Kim whose telephone number is (571)272-2294. The examiner can normally be reached on 9:00-6:30 M-F.
